Q1

$$\begin{aligned} \text{(a)} \quad E &= \frac{1}{2} k A^2 \\ &= \frac{1}{2} (35.0 \text{ N/m}) (4.00 \times 10^{-2} \text{ m})^2 \\ &= 28.0 \text{ mJ} \quad \text{marks} \end{aligned}$$

$$\begin{aligned} \text{(b)} \quad |v| &= \omega (A^2 - x^2)^{1/2} = \sqrt{\frac{k}{m}} (A^2 - x^2) \\ &= \underline{\underline{1.02 \text{ m/s}}} \end{aligned}$$

$$\begin{aligned} \text{(b)} \quad \frac{1}{2} m v^2 &= \frac{1}{2} k A^2 - \frac{1}{2} k x^2 \\ &= 12.2 \text{ mJ} \quad \text{marks} \end{aligned}$$

$$\begin{aligned} \text{(c)} \quad \frac{1}{2} k x^2 &= E - \frac{1}{2} m v^2 \\ &= 15.8 \text{ mJ} \quad \text{marks} \end{aligned}$$

Q2

For first pipe,

$$\lambda = v/f = \frac{343 \text{ m/s}}{256 \text{ s}^{-1}} = 1.34 \text{ m}$$

$$\therefore \text{Length } d_1 = \lambda/2 = 0.67 \text{ m} \quad \text{marks}$$

For second pipe,

$$\lambda = v/f = \frac{343 \text{ m/s}}{440 \text{ s}^{-1}} = 0.78 \text{ m}$$

$$\therefore \text{Length } d_2 = \lambda/2 = 0.39 \text{ m} \quad \text{marks}$$

$$(b) \therefore \text{Original length} = d_1 + d_2 = 1.06 \text{ m}$$

$$\therefore \lambda = 2(d_1 + d_2) = 2.12 \text{ m} \quad \text{marks}$$

$$(a) \therefore f = v/\lambda = \frac{343}{2.12} = 162 \text{ Hz} \quad \text{marks}$$

~~(c) For closed end, $\lambda = 4d$~~

$$\therefore \text{tube 1, } \lambda = 2.68 \text{ m}$$

$$f = v/\lambda = 128 \text{ Hz}$$

$$\therefore \text{tube 2, } \lambda = 1.56 \text{ m}$$

$$f = v/\lambda = 220 \text{ Hz}$$

Q3 The mica introduces an optical path length $\Delta L = nt - t$ of 7 wavelengths. marks

$$\therefore t(n-1) = 7\lambda \quad \text{marks}$$

$$\therefore t = \frac{(7)(550 \times 10^{-9})}{(1.58 - 1)} = 6.64 \times 10^{-6} \text{ m} \quad \text{marks}$$

Q4

Air

SiO₂

Silicon

- a) Ray 1 undergoes π phase ^{change} on reflection marks
Ray 2 " " π " " " " marks

\therefore Require an additional path length of $\lambda_n/2$ to create destructive interference

$$\therefore t = \lambda_n/4 = \frac{\lambda}{4n} = \frac{550}{4(1.45)} = 94.8 \text{ nm} \quad \text{marks}$$

b) ~~Minimum reflection when $\lambda_n/2 = t$~~

$$\lambda = \frac{2nt}{n} = 275 \text{ nm}$$
